

In this special issue of The Volpi Voice, we're recapping our 2021 Thought Leadership Program.

Here, you'll find valuable downloads, webinars, illustrations and videos that showcase challenges and opportunities facing our instrument manufacturer clients, their clients and the IVDs.

We'll also dive into more of the Life Sciences industry as a whole.

So, let's get started!

Design Transfer

Volpi excels at designing and implementing lean manufacturing processes suitable for reliably achieving highly variable production outputs. Thanks to integrated and well-documented work instructions, as well as highly experienced and trained production personnel, we can achieve high and consistent product quality.

To explore how to get your instrument designs to market effectively and efficiently, [download](#) our FREE "Critical Success Factors in moving from optical design to manufacturing" guide or [watch our webinar](#) featuring Stephen Chabot, Volpi's COO and President of Volpi USA.

Diagnostics and Life Sciences Post-COVID?

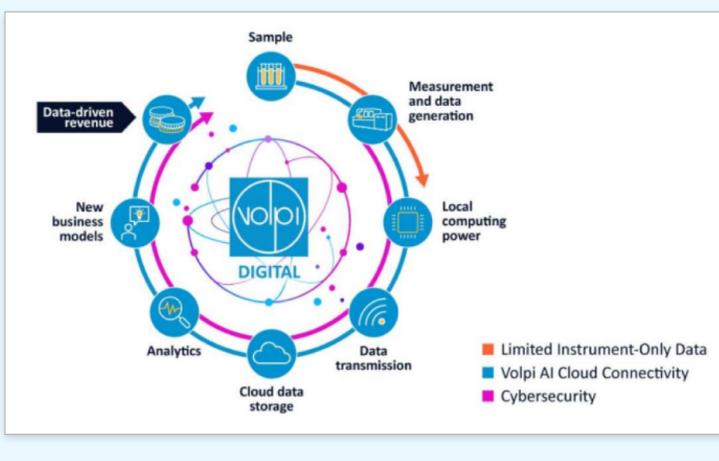

COVID has changed, well, just about everything about our industry. The wide variety of changes, however, might leave you wondering which ones are unique to COVID and which are here to stay.

To learn about Volpi's view of Diagnostics post-COVID, [download](#) "The future of diagnostics in a Post-COVID world" guide or hear from Volpi CEO Max Kunz in our webinar. Kunz discusses how key developments during the pandemic should be informing your product development, sales, marketing and maybe even business model plans in both the short and long term.

AI and Intelligent Optics

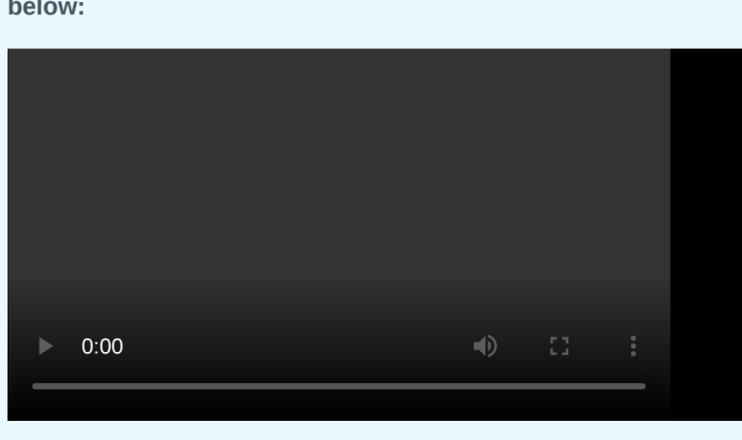

Over the past decade, artificial intelligence (AI) has become increasingly important as a disrupter in the future of medicine. Big data and advances in technology are driving opportunities for the application of AI and machine learning (ML) in health care and clinical decision-making at an unprecedented pace.

Volpi's intelligent optical modules enable cloud-based performance analytics, remote management and unique services leading to significant benefits to instrument manufacturers and their customers, including:

- ✔ Decreased TCO
- ✔ More efficient operations
- ✔ Remote monitoring and service
- ✔ Predictive maintenance
- ✔ Valuable performance insights
- ✔ New revenue-generating business models

To learn more, download our guide [here](#) or check out our video below:

Looking Toward 2022

Our friends at Plexus held a roundtable to discuss what they see as important trends for 2022. You can view it [here](#).

New Team Members!

Volpi is always growing, so say "hello" to some of our new team members.

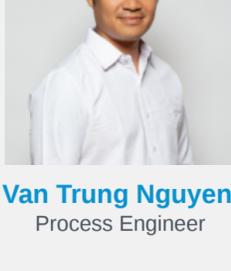

Rolf Maisch

Director of Strategic Projects

Bruno Melaneo

Lead Embedded Software Engineer

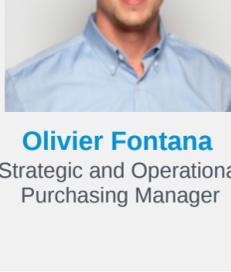

Van Trung Nguyen

Process Engineer

Luca Kunz

Research and Development Trainee

Olivier Fontana

Strategic and Operational Purchasing Manager

Tamara Kolodziejczyk

Assistant to Switzerland CEO and Head of Sales and Marketing
